Arya Nazare

Data Engineer | Data Management · SQL · Python · Databricks
+91 94048 73712 · arya.nazare29@gmail.com · linkedin.com/in/arya-nazare-3a22b8292 · github.com/AryaN29092003

Professional Summary

Data Engineer with hands-on experience in **data management, data validation, data quality, and structured data delivery** using **SQL, Python, Databricks, and PySpark**. Currently building production healthcare data pipelines with **schema validation, Delta Lake, and reusable validation utilities**. Previously interned at **Linde Engineering**, where I automated extraction of 15+ data fields from unstructured PDFs and consolidated multi-year shipment records into a structured dataset, cutting manual data entry time by 90%. Experienced with **relational and NoSQL databases** (PostgreSQL, MySQL, MongoDB) and comfortable working with teams across departments.

Technical Skills

Data Management: Data Validation, Data Quality, Data Completeness, Structured Datasets, Database Management, Audit & Reporting Data
Languages: Python, SQL, Java, C++
Databases & Data Platforms: MySQL, PostgreSQL, MongoDB, SQLite, Firebase, Supabase, Databricks, Delta Lake
Data Engineering: PySpark, ETL Pipelines, Kafka, Avro, Schema Registry, Data Validation, JSON Normalization, Incremental Processing
Data Extraction & Analysis: Pandas, Tabula (PDF table extraction), Scikit-learn, Seaborn
Backend & APIs: FastAPI, Flask, REST APIs
Tools: Power BI, Git, OpenTelemetry, VS Code

Experience

Software Engineer Feb 2026 – Present
Newscape Consulting *Pune, Maharashtra, IN*
- Designed and developed scalable **healthcare data integration pipelines** using **Databricks, PySpark, Delta Lake, Kafka, and MongoDB**, building reusable ETL frameworks for Client, Worker, Visit, Authorization, Coverage, Payor, Episode of Care, and Care Team data.
- Implemented **schema validation**, Delta MERGE, and **Change Data Feed (CDF)** to keep data accurate and consistent across pipeline runs.
- Created reusable Spark utilities for **data validation**, JSON normalization, **incremental processing**, and performance optimization; built **Kafka and MongoDB** persistence services using Avro and Schema Registry.

Intern Jan 2025 – May 2025
Linde Engineering India Pvt. Ltd. *Vadodara, IN*
- Automated **extraction of 15+ data fields from unstructured PDFs** using Python (Tabula, pandas), reducing manual data entry time by **90%**.
- Consolidated multi-year shipment records into a **structured dataset**, improving audit and reporting efficiency across departments.

AI Backend Engineer Intern Sept 2025 – Dec 2025
VerifyLens, PMAccelerator *Remote*
- Designed the **PostgreSQL schema** and built the **FastAPI** backend with JWT authentication, document-upload flows, claim-extraction logic, and **REST APIs** for transcription and fact-verification pipelines.

Projects

Plant Equipment Data Quality Checker | *Python, Pandas, SQL, MySQL, Power BI* github.com/AryaN29092003/plant-data-quality-ch
- Generated a **synthetic 5,000-record plant equipment register** (Python, Pandas, Faker) with deliberately injected errors, and loaded it into a normalized **MySQL** schema with lookup tables.
- Implemented **six data validation rules** in SQL and Python (mandatory fields, tag uniqueness, status codes, date validity, value ranges, referential consistency), logging pass/fail counts per rule to measure **data quality and completeness**.
- Built a **Power BI dashboard** showing overall quality score and failures by rule, equipment type, and area; checked rule results against the known injected-error counts.

TDNVM Community Website – Backend (Freelance) | *Python, FastAPI, Supabase/MySQL, JavaScript* github.com/TDNVM-server
- Developed the FastAPI backend with **Supabase/MySQL** for data storage, designed REST APIs, and implemented authentication.

Certifications

Databricks Certified Data Engineer Associate, issued Sept 2026 View Credential
Databricks

Education

Navrachana University Vadodara, IN
B.Tech in Computer Software Engineering *Aug 2021 – May 2025*
- GPA: 9.23 / 10.00
